

Electromechanical Assembler Tester, Cambridge PE27, £19K-20K

A well-established Manufacturer experiencing organic growth; is looking for an additional electromechanical Assembler Tester to join a highly successful and passionate team.

Reporting to the Instrumentation Assembly Supervisor you will be responsible for assembly and testing of engineering equipment, completing associated documentation to ensure quality standards are met.

You will have worked methodically within a production assembly environment, with good mechanical skills and the ability to read technical drawings and record relevant and accurate information on MS Excel. You will enjoy learning and possess a conscientious and reliable personality with good English, that's written and spoken to ensure accurate documentation.

Key responsibilities include:

- Assemble precision mechanical and electro-mechanical components from technical drawings or models
- Use the ERP software system to plan, pick, issue items and assign serial numbers where required, for the assembly of the product using the Job Traveler
- Assemble components, completing in-process inspection during assembly
- Test the assembled components using hydraulic equipment in the test room or the bench electronic equipment to the required specifications
- Ensure all components meet required level of quality and follow any non-conformance procedures
- Complete all associated documentation and ensure compliance with ISO9001 procedures
- Follow health and safety policy, highlight any health and safety issues to line management
- Participate in any project or carry out specific tasks that may be assigned by your Manager from time to time in your or any other department
- Work independently without constant supervision
- Work in a clean and tidy work environment

This company offers exceptional benefits package and working environment where investment in people is key to their success.
